Sachin Kumbar

Senior Software Engineer | Backend & Distributed Systems | Node.js, TypeScript, AWS, AI

Bengaluru, Karnataka | +91 94813 29017 | kumbarsachin67@gmail.com | linkedin.com/in/sachin-kumbar-634b42171 | github.com/kumbarsachin67gmail | sachinkumbar.in

SUMMARY

Senior Software Engineer with 6 years building backend-heavy enterprise SaaS in Node.js, TypeScript and AWS. Known for shipping integration-heavy features end to end: document generation, third-party platform integrations (Smartsheet, Gmail) and production AI features with OpenAI / Azure OpenAI. Previously led a team of 4 engineers building event-driven microservices.

SKILLS

Languages: JavaScript, TypeScript, Python, SQL
Backend: Node.js, NestJS, Express, FastAPI, REST APIs, GraphQL, gRPC
Frontend and Testing: React.js, Redux, Material UI, Vue.js, Playwright (E2E), pytest
Data, Search and Messaging: MySQL, PostgreSQL, MongoDB, Redis, Elasticsearch, RabbitMQ, Google Pub/Sub
Cloud and DevOps: AWS (EC2, Lambda, S3, EventBridge, CodeBuild), Docker, Kubernetes, CI/CD, Git, GitLab, Jira
Architecture: Microservices, Event-Driven Architecture, Domain-Driven Design, CQRS, Agile (Scrum)
AI: OpenAI, Azure OpenAI, LLM Integration, Claude Code (skills, MCP servers, plugins), Cursor

EXPERIENCE

Senior Software Engineer, iSpace Technologies, Hyderabad **Feb 2024 – Present**

Client: Korn Ferry, global organizational consulting firm. KFAdvance: enterprise SaaS for leadership assessment, coaching and talent development (client, coach and admin portals)

- Developed a browser-based PowerPoint generation engine (React, JSZip) that dynamically fills versioned S3-hosted branded templates with editable text, tables, charts and images, reducing manual report preparation effort by 50%
- Built the Smartsheet integration from scratch (EU/US region compliance, multi-template workflows, real-time job tracking), cutting manual setup effort by 35%
- Optimized SQL queries and database operations for large-dataset synchronization, improving API response time by 25%
- Designed event-driven consent workflows on AWS EventBridge and secure document delivery via S3 signed URLs with role-based access control
- Built a configurable report system with template selection, page-level customization and PDF generation
- Developed deep-clone of engagement configurations with selective overrides, letting teams reuse complex setups across client engagements

Fullstack Engineer, Edvoy Technologies, Chennai **Nov 2020 – Jan 2024**

Student-recruitment platform (B2B and B2C) connecting students, counsellors, universities and agents

- Led a team of 4 developers: planned and assigned work, owned delivery timelines, reviewed code and mentored junior engineers
- Built NestJS microservices on MongoDB and Redis using Domain-Driven Design, with RabbitMQ-based asynchronous pipelines that improved background processing efficiency by 20%
- Built the Elasticsearch-powered search engine and counsellor dashboards for the CRM, improving search response time by 20% (Employee Appreciation Award, 2023)
- Integrated the Gmail API into Edvoy-edge (B2B) so counsellors could send and receive email inside the platform
- Rebuilt the Partnership Module's agent workflows and territory framework after migrating institution data, and built a configurable data-table system with saved views, filtering and streamed exports

PROJECTS

AI-Powered Notes Editor, KFAdvance **OpenAI / Azure OpenAI, React, Node.js**

- Designed an AI-powered content editor integrating OpenAI and Azure OpenAI through structured API workflows for summarization, tone adjustment and perspective transformation
- Developed audit logging for traceable AI interactions, plus progressive typing and dynamic response rendering for a responsive editing experience

Paper Trading Platform for NSE Stocks (Personal Project) **React, TypeScript, Python, FastAPI, PostgreSQL**

- Built a full-stack paper-trading app with a React 18 + TypeScript (Vite) frontend and a FastAPI backend, simulating trades on live NSE prices from the Upstox API with OAuth login
- Built a stock screener on daily candles with hand-written technical indicators (SMA, EMA, RSI, MACD, Bollinger Bands), avoiding heavy libraries like pandas and TA-Lib
- Used SQLAlchemy 2 to run the same data layer on SQLite locally and Neon Postgres in production; covered the API with pytest using an isolated database per test

AWARDS

Employee Appreciation Award (2023), Edvoy Technologies, for the Elasticsearch-based search engine

EDUCATION

B.E., Electronics and Communication Engineering, NMAM Institute of Technology **Aug 2016 – Jun 2020**
